KlarityRisk

KlarityRisk Exhibits Paragon at AdventConnect14 in Barcelona

London – September 1, 2014 – Klarity Risk, a fast growing European provider of Risk Management solutions focused on the Investment Management Industry, will participate in the AdventConnect Conference, in Barcelona, 24-26 September, an event dedicated to the Advent Software Community.

On Friday, 26 September, Advent's Senior Product Managers will present a session in relation to Risk and Portfolio Management in Today's Regulatory Environment and a Q&A session will follow.
KlarityRisk will be a main exhibitor in this User Conference event, and our team will be providing Conference attendees the opportunity to get updated on Paragon's features, such as Credit Rating Risk, Stress Testing and SSRS report incorporation into Advent's APX dashbards. In addition, we'll also demonstrate the integration benefits that Paragon holds with Advent's APX or Axys or Geneva solutions, for a complete STP and viral solution to maximize internal data structure for all calculations and reports.

"We are thrilled to participate in such an event with so many valuable Advent clients and be given the opportunity to demonstrate Paragon's functionality and benefits." said Mr. Makis Ioannou, KlarityRisk' s CEO. "Our current clientship in Greece, The Netherlands, Norway and Switzerland is fast growing and the functionality of our solution is enhanced on a semester basis via internal R&D investments. *We continuously strive to deliver industry-standard and stable solutions that help our clients in streamlining workflows within their business, minimizing risks and realizing quick ROI via their technology investment on our solutions."*

About Klarity Risk
KlarityRisk is a financial risk management software solutions provider, exclusively focused on the buy-side sector of the Investment Management industry. All KlarityRisk products are fully integrated with Advent Software applications.

Paragon, our risk management application, supports VaR measures (Expected Shortfall, Relative VaR, Tracking Error and Diversification Benefit) and various VaR methodologies including Monte Carlo.
Also, Marginal and Component VaR, as well as Stress Testing, What-If, Back Testing calculations and reports, with data directly derived from Advent's APX or Axys or Geneva environment is included.
